

Promoting Health and Hygiene

Managing Children Who Are Sick Or Infectious

(Including reporting notifiable diseases)

Policy Statement

We provide care for healthy children and promote health preventing cross infection of viruses and bacterial infections.

Procedures

- If children appear unwell during the day – have a temperature, sickness, diarrhoea or pains, particularly in the head or stomach – the manager calls the parents and asks them to collect the child, or send a known carer to collect on their behalf.
- If a child has a temperature, they are kept cool, by removing top clothing, sponging their heads with cool water, but kept away from draughts.
- Temperature is taken using a 'fever scan' kept near to the first aid box.
- In extreme cases of emergency the child should be taken to the nearest hospital and the parent informed.
- Parents are asked to take their child to the doctor before returning them to nursery; the nursery can refuse admittance to children who have a temperature, sickness, vomiting and diarrhoea or a contagious infection or disease.
- Where children have been prescribed antibiotics, parents are asked to keep them at home for 48 hours before returning to the setting.
- After diarrhoea and or vomiting, parents are asked to keep children home for 48 hours or until a formed stool is passed.
- The setting has a list of excludable diseases and current exclusion times. The full list is obtainable from www.hpa.org.uk/servlet/ContentServer?c=HPAweb_C&cid=1194947358374&pagename=HPAwebFile and includes common childhood illnesses such as measles.

Reporting of 'notifiable diseases'

- If a child or adult is diagnosed suffering from a notifiable disease under the Public Health (Infectious Diseases) Regulations 1988, the GP will report this to the Health Protection Agency.
- When the setting becomes aware, or is formally informed of the notifiable disease, the manager informs Ofsted and acts on any advice given by the Health Protection Agency.

HIV/AIDS/Hepatitis procedure

- HIV virus, like other viruses such as Hepatitis, (A, B and C) are spread through body fluids. Hygiene precautions for dealing with body fluids are the same for all children and adults.
- Single use vinyl gloves and aprons are worn when changing children's nappies, pants and clothing that are soiled with blood, urine, faeces or vomit.
- Protective rubber gloves are used for cleaning/sluicing clothing after changing.
- Soiled clothing is rinsed and is bagged for parents to collect.
- Spills of blood, urine, faeces or vomit are cleared using mild disinfectant solution and mops; cloths used are disposed of with the clinical waste.
- Tables and other furniture, furnishings or toys affected by blood, urine, faeces or vomit are cleaned using a disinfectant.
- Children do not share tooth brushes. Parents are asked to provide a toothbrush for their child.

Nits and head lice

- Nits and head lice are not an excludable condition, although in exceptional cases a parent may be asked to keep the child away until the infestation has cleared.
- On identifying cases of head lice, all parents are informed and asked to treat their child and all the family if they are found to have head lice.
-
